1 1) China generates the highest amount of e-waste in the world with about 12. million tonnes (Mt)
2) India is the second-largest e-waste generator producing about 4.1 Mt per year.
3) Russia generates about 1.7 Mt of e-waste
4) Brazil produces about 1.6 Mt of e-waste
5) Mexico generates about 1.5 Mt of e-waste
6) South Africa generates about 0.4 Mt of e-waste.
7) India generates around 3 times less e-waste than china, but about 2.5-3 times more than Russia, Brazil and Mexico.
8) India produces nearly 10 times more e-waste than South Africa.

9) China and India together account for a major share of global e-waste generation because of their large populations and rapid growth in electronic device usage.

10) Recycling infrastructure is most advanced in China while India, Brazil, Mexico, Russia and South Africa are still improving.

2. Strengthen e-waste collection systems by setting up more authorized collection centers and drop-off points.

Promote recycling and reuse through certified recycling facilities that safely recover valuable materials.

Increase public awareness about the harmful effects of improper e-waste disposal & encourage responsible recycling.

Implement Extended Producer Responsibility by making manufacturers responsible for collecting & recycling their products after use.

Enforce strict government regulations to prevent illegal dumping and ensure compliance with e-waste management rules.

Integrate informal recyclers into the formal system through skill development and safety training.
